Question Name:

Concept: Population centre

Totals may not add up due to rounding.

Question Text:

Universe: All respondents

Note: Information derived using postal codes.
A population centre (POPCTR) has a population of at least 1,000 and a population density of 400 persons or more per square kilometre, based on population counts from the current Census of Population. All areas outside population centres are classified as rural areas.

Taken together, population centres and rural areas cover all of Canada.

Population centres are classified into three groups, depending on the size of their population:
- small population centres, with a population between 1,000 and 29,999
- medium population centres, with a population between 30,000 and 99,999
- large urban population centres, with a population of 100,000 or more.

Variable Name: GENDER **Length:** 1.0 **Position:** 15

Question Name:

Concept: Gender - Derived variable

Question Text:

Universe: All respondents

Note: Refers to current gender which may be different from sex assigned at birth and may be different from what is indicated on legal documents. For data quality and confidentiality reasons, and because of the small population being measured, the dissemination of data according to 'Non binary' Gender is not possible for this statistical program. So, this release uses a gender variable with only two categories. This variable is derived by looking at a large number of demographic characteristics from the respondent, it allows us to disseminate data on Gender that is reliable and unbiased.
